

## STAIR NOSING CLEANING INFORMATION

Anti-slip extruded aluminum safety stair nosings may be cleaned with a mixture of mild detergent and water, using a soft bristle brush.

It is important **NOT** to use strong solvents such as acetone, MEK, or any product containing methylene chloride.

We do **NOT** recommend pressure washing the stair nosings.

A light coating of a water-based vinyl or rubber protectant may help restore the abrasive filler to its original color.
